

Media-Log™

Simple Media Moisture & Temperature Sensing & Logging

Description

A simple media/soil monitor that monitors and logs moisture content and temperature levels.

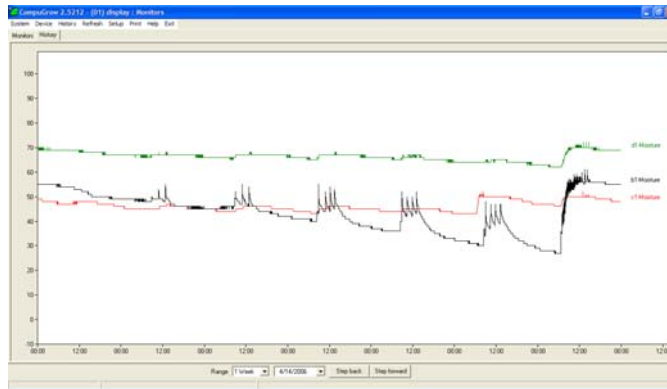

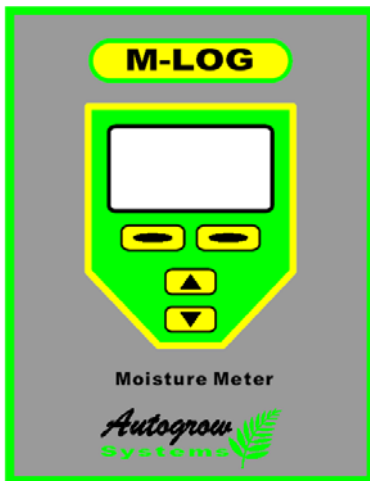

Units can be optionally connected to a PC and various test sites can be compared to assist in developing a uniform irrigation/fertigation strategy.

Applications

Hydroponics
Nurseries
Soil Crops

Monitors

Temperature
Moisture

Advantages to the Grower

- Instantly see the media/soils moisture and temperature
- Watch trends in moisture and temperature over time to modify irrigation/fertigation strategies
- Alarms for high and low levels provide peace of mind when not on site
- Analyze and compare several different sites to get a correct overall picture of the temperature and moisture profile

Optional Features
200mm or 80mm
Moisture sensor

PC Interface
Temperature sensor
1-25 Additional
Temperature Sensors

Remote Monitoring & Alarms

The Media-Log™ has inbuilt alarms that provide an audible sound on the control unit. In addition when connected to a PC the system will dial out via the computers modem and advise the growers nominated number that an alarm threshold has been breached.
